

# 7 FUN FACTS ABOUT WATERCOLOR

1

Watercolor is a mix of pigment and gum Arabic, a natural “glue” made from the sap of the Acacia tree.

2

Artists rarely use white in traditional watercolor painting. Instead, they lighten colors by diluting them with water.

3

Watercolor varies in transparency, depending on how much the artist dilutes the pigment.

4

Watercolors come in many forms, such as pans, tubes, or liquids.

5

Due to differences in formulations, colors can appear different among different brands.

6

In the 19th century, honey was added to watercolors to help preserve the paint.

7

Although forms of watercolor painting have been around since prehistoric times, watercolor, as we know it today, gained popularity in the 19th century.
