

# WHAT IS AN ANALOGOUS COLOR SCHEME?

Analogous colors are groups of three colors that are next to each other on the color wheel sharing a common color with one being the dominant color (which tends to be a primary or secondary color and a tertiary).

One example would be a painting where blue, blue-greens, and green hues are used. A range of value between each color is generally used as well. Analogous colors are like taking a slice of pie or pizza out of the color wheel and only using those colors in the slice.
